

Important information for centres entering candidates for the COMP1 examination using the Java programming language

For the examination, AQA is making the following resources available.

Standard classes for:

- a console (AQAConsole2013)
- reading from a text file (AQAReadTextFile2013)
- writing to a text file (AQAWriteTextFile2013).

Candidates will be allowed to use these resources in the examination. These resources can be found by following the path below in the Secure Key Materials area for Computing on e-AQA.

A-level > Computing > COMP1 > Important information relating to Java and VB6 > Java

Candidates are encouraged to use these classes throughout the year. These classes are not compulsory; centres may choose not to use them.

NB: for the 2013 examination, candidates must use the latest version of the AQAReadTextFile (filename: AQAReadTextFile.2013).
